

# How do I change my mobile budget settings?

To change your budget settings for mobile and web

1. Click the **Mobile & Web** tab.
2. Click [change] to edit your current budget settings; if you don't have a Quicken budget yet, click [create a budget] to get started.
3. If prompted, enter your password. Depending on how you've set things up, this may either be your **Password Vault** password, or your **Quicken ID** password.
4. Select the budget you want to sync with **Quicken Mobile and Web**, or select **Don't sync budget data**.
5. Click **OK** to update your budget settings.

Here's what you should know about syncing a budget:

- If you have a budget in your desktop software, but you don't have a budget on Quicken Mobile or Web, it is transferred to Quicken Mobile and Web when you sync.
- If you are already syncing a budget, and you select a different budget to sync in your desktop software, the selected budget will replace the budget currently on Quicken Mobile and Web.
